

**We take care of
your drive.**

**The technical service
of SSB Duradrive.**

Your SSB Duradrive quality service

As individual as our development of drives is our service. 365 days a year we are there for you with our know-how and our vigour – for the entire life cycle of your machine. Whether for prevention, repair or replacement.

Full expertise. Full range.

For many years we as CEDS DURADRIVE use our knowledge for your needs. We design, produce and maintain individual and durable drive systems.

No worries! ① ② ⑥

You operate drives by other manufacturers? No problem! Our experts maintain, inspect and repair other makes as well. Those other manufacturers do not want to or simply cannot repair your drive anymore? We help, no matter if standard or individually designed drive.

One for all ⑨

We do not use our modern testing facility all by ourselves. You and even our competition may test drives with us.

Watching closely ④

Condition Monitoring by CEDS DURADRIVE gives a feeling of safety and increases the efficiency of your drive system. We regularly monitor the state of your machines by measuring and analysing certain parameters, like vibrations and temperatures. This way we can recognise deviations and act upon them.

Old timers with perspective ⑦

Retrofit-solutions by CEDS DURADRIVE boost your old machines. We modernise your drives and turn them to state-of-the-art. That makes them more durable, more productive and safer. And if a replacement appears to be more appropriate than a retrofit-solution, we also help with a customised and perfect solution.

Worry free – all along ③ ⑤ ⑧ ⑩

We maintain, inspect and repair your customised drive system. We completely comply to your individual wishes, know your industry and want you to be completely satisfied. And if the worst comes to the worst our experts are there for you – 365 days a year.

Our service concept

Prevention >>		Repair >>		Replacement	
1	Maintenance Agreements & preventive maintenance	5	Spare part delivery and production	7	Conversion & modernisation
2	Inspection & status assessment	6	Repair		
3	Process optimisation				
4	Condition Monitoring				
8	Technical hotline 24/7				
9	Tests				
10	Collection/return service including demounting and installing components				

Many deployment options and a common feature

“Oh, you offer service too?” Occasionally our employees see surprise in customers’ faces who had not previously associated CEDS DURADRIVE with service for their industry. But in fact we take care of every single product that leaves our company. Incidentally, that also applies to third-party makes. This is because wherever your drive is in service, one thing remains constant: your CEDS DURADRIVE quality service takes care of durable and reliable operation. Just contact us!

Logistics, driving, extracting, handling

We produce compact and durable hoist and drive motors, environmentally friendly AC motors, PM drives as well as linear drives.

Measuring and testing technology

We have devised versatile solutions with AC motors in both air-cooled and water-cooled versions for various manufacturers of test stands for brakes and engines.

Electromobility

We individually construct and produce perfectly fitting drive systems for your valuable special-purpose machine.

Machine tools and production systems

For you, we produce highly dynamic and compact servo drives for rotary and linear motions.

Printing and paper technology

For you, we design compact drives, drives for high-speed applications and direct drives for cooling rollers and calenders.

Stage technology

In the largest theatres our drives ensure trouble-free and safe performances. We deliver noise-optimised drive systems and space saving flexible drives.

Plastic and rubber machines

Our drives for extruders ensure smooth running properties, high energy efficiency, plus protection against external influences.

Textile machines

Whether DC, asynchronous, synchronous servo or high torque, we devise the right solution for your textile machinery with you.

Food and packaging machines

As a replacement for sensitive hydraulic solutions, we offer all motors in electric stainless steel design.

Renewable energy

We have over 15 years’ experience in pitch, azimuth and rotor-lock drives, electromechanical brakes in addition to synchronous and asynchronous generators. Harvest energy from water and feed it into the power grid by utilizing our asynchronous generators, PM synchronous generators and converters. Do also ask for solutions for combined heat and power plants (CHP)!
